

# Triax2000 and Triax2010 Compliant to ASTM F1292

The following is a list of Triax2000 and Triax2010 devices and owners that have opted to be part of this voluntary list. ASTM F1292 requires that the device comply with the Standard and that the operator is trained. Canadian Playground Advisory Inc. does provide training and refresher training the person performing the test and they should be able to provide you copies of the device calibration, pre-test report and training certificate. They may also use the ASTM F1292 test report template that is provided for consistency.

This list will be updated quarterly.
